SCIENTIFIC AND TECHNOLOGICAL CREATIVITY OF YOUNG

PEOPLE: IN SEARCH OF A NEW GOAL-DIRECTED MOTIVATION

Using the economic and sociological approach, the Soviet and post-Soviet

experience of the development of scientific and technological creativity of young

people is analyzed. Since innovative activity of Soviet inventors was organized

within the framework of specific branches of industry, that led to the fact that most

commercially successful inventions were developed in the military-industrial complex. Improving and inventing everyday items for household use was getting relatively less attention on the countrywide scale.

These days scientific and technological creativity of young people is getting momentum anew, induced by a novel goal-directed motivation. In a competitive environment, technological creativity assumes more importance owing to the possibility of commercializing innovative inventions in the national economy. Currently, the inventions that can be commercialized promptly and cheaply are given priority. Technical universities are becoming platforms for the implementation of commercially viable engineering projects.

Keywords: scientific and technological creativity of young people, commercialization, entrepreneurship in technology.

THE INTERACTION BETWEEN THE SECTORS OF HIGHER

EDUCATION, BUSINESS, STATE AND SOCIETY IS VITAL FOR

NATIONAL SECURITY WHEN BUILDING THE INFORMATION

ECONOMY

The article highlights digital transformations as one of the main driving forces of

changes in the modern world in the context of the transition to the information

economy. The digital economy is viewed in the light of new risks and threats to

national security. The authors outline new approaches to the interaction of

educational institutions and enterprises, and to the structuring of business, state and

society as a whole in the context of global changes in economy and in

technological basis.

Keywords: information economy, innovative economy, digital transformations,

digital economy, national security, information security, innovative security,

personnel security, higher education, business, state, society, risks and threats,

Internet, artificial intelligence, industry 4.0.

THE EXTERNAL DEBT PROBLEM GOES GLOBAL:

ITS COMPOSITION, PROPSPECTS AND TRENDS

The author pays special attention to the global nature of the external debt problem

which becomes one of the most acute financial and economic problems. In the

author's opinion, a rapid growth of the majority of the countries' external debt may result in a series of sovereign external debt defaults, which will trigger a new and stronger global financial and economic crisis.

Keywords: global external debt, sovereign external debt, external debt of Russia, indicators of debt sustainability, sovereign external debt default.
